Technical books – ideal if considering further training to become a medical herbalist 3

Further reading suggestions for Foundation Course students

Note: There will be references to other books, journals, on-line and other resources in every Unit of the course. The following books are not 'essential', but it is a good idea to look at a few and choose two or three that catch your eye and suit your personal learning style. They are divided into categories, but there is considerable crossover – some books cover a bit of history, medicinal use and home remedies, for example. Reading online reviews may help you get a feel for the books contents and approach to the subject. The **bold** title may be of particular interest.
